AN ACT
RELATING TO PUBLIC UTILITIES AND CARRIERS

Introduced By: Representatives Carnevale, Blazejewski, Regunberg, McKiernan, and O'Brien
Date Introduced: January 06, 2016
Referred To: House Corporations

It is enacted by the General Assembly as follows:

SECTION 1. Section 39-26.3-2 of the General Laws in Chapter 39-26.3 entitled “Distributed Generation Interconnection” is hereby amended to read as follows:

39-26.3-2. Definitions. -- The following terms shall have the meanings given below for purposes of this chapter:

(1) "Applicant" means an electric distribution customer or distributed generation developer who submits an application to the electric distribution company for the installation of a renewable distributed generation interconnection to the distribution system for a renewable distributed generation project that, as contemplated, meets the eligibility requirements for net metering contained within title 39 or the eligibility requirements for a standard contract contained within title 39.

(2) "Impact study" means an engineering study that includes an estimate of the cost of interconnecting to the distribution system that would be assessed on the applicant for an interconnection that is based on an engineering study of the details of the proposed generation project. Such estimate generally will have a probability of accuracy of plus or minus twenty five percent (25%). Such an estimate may be relied upon by the applicant for purposes of determining the expected cost of interconnection, but the distribution company may not be held liable or responsible if the actual costs exceed the estimate as long as the estimate was provided in good faith and the interconnection was implemented prudently by the electric distribution company.

(3) "Impact study fee" means a fee that shall be charged to the applicant to obtain an
impact study as specified in § 39-26.2-4 of this chapter.

(4) "Feasibility study" means a high-level project assessment that includes an estimate of the cost of interconnecting to the distribution system that would be assessed on the applicant for an interconnection. Such estimate is not based on any engineering study, but is based on past experience and judgment of the electric distribution company, taking into account the information in the application, the location of the interconnection, and general knowledge of the distribution and transmission system. Such estimate cannot be relied upon by the applicant for purposes of holding the electric distribution company liable or responsible for its accuracy as long as the electric distribution company has provided the estimate in good faith. The feasibility study estimate shall be a range within which the electric distribution company believes the interconnection costs are likely to be and shall include a disclaimer that explains the nature of the estimate.

(5) "Feasibility study fee" means a fee that shall be charged to the applicant to obtain a feasibility study as specified in § 39-26.2-4 of this chapter.

(6) "Renewable energy resource" has the same meaning as defined in §39-26-5.

SECTION 2. Chapter 39-26.3 of the General Laws entitled "Distributed Generation Interconnection" is hereby amended by adding thereto the following section:

39-26.3-4.1. Interconnection standards. -- (a) The electric distribution company may only charge an interconnecting renewable energy customer for any system modifications to its electric power system specifically necessary for and directly related to its interconnection. Any system modifications benefiting other customers shall be included in rates as determined by the public utilities commission.

(b) If the public utilities commission determines that a specific system modification benefiting other customers has been accelerated due to an interconnection request, it may order the interconnecting customer to fund the modification subject to repayment of the depreciated value of the modification as of the time the modification would have been necessary as determined by the public utilities commission.

(c) If an interconnecting renewable energy customer is required to pay for system modifications and a subsequent renewable energy or commercial customer relies on those modifications to connect to the distribution system within ten (10) years of the earlier interconnecting renewable energy customer's payment, the subsequent customer will make a prorated contribution toward the cost of the system modifications which will be credited to the earlier interconnecting renewable energy customer as determined by the public utilities commission.
(d) All interconnection work must be performed no longer than two hundred seventy (270) calendar days from completion of the renewable energy customer's interconnection impact study pursuant to §39-26.3-3, if required, or else no more than three hundred sixty (360) calendar days from the customer's initial application for interconnection. These deadlines cannot be extended due to customer delays in providing required information, all of which must be requested and obtained before completion of the impact study. The electric distribution company will be liable to the interconnecting customer for all actual and consequential damages resulting from the noncompliant interconnection delay including, but not limited to, the full value of any lost energy production, and any reasonable legal fees and costs associated with the recovery of those damages. These penalties and damages shall be borne by the electric distribution company's shareholders, not by the electric distribution company's ratepayers.

(e) The interconnection of any new renewable energy resource that replaces the same existing renewable energy resource of the same or less nameplate capacity shall not be considered a material modification requiring interconnection study or approval other than a review to determine consistency with this section and to establish any costs specifically necessary to interconnect the replacement renewable energy resource, which shall not include any system modifications or system improvements. This review shall take no longer than sixty (60) days subject to the penalties provided in subsection (d) of this section.

(f) The electric distribution company shall not require interconnecting customers that do not propose to and will not make direct sales to the wholesale market, including, but not limited to, those enrolled under chapters 26.2, 26.4, and 26.6 of title 39, to comply with regulatory requirements applicable to wholesale customers or sales, as defined according to 16 U.S.C. §824. If the electric distribution company sells any electricity generated by such interconnecting customers in the wholesale markets, the electric distribution company will be the designated market participant and designated entity for such sales, complying with all applicable, regulatory requirements without any delay to the interconnection schedule set forth in subsection (d) of this section. The interconnecting customer shall assist the electric distribution company by providing information and access for such compliance if/as necessary and appropriate.

SECTION 3. Sections 39-26.4-2 and 39-26.4-3 of the General Laws in Chapter 39-26.4 entitled “Net Metering” are hereby amended to read as follows:

39-26.4-2. Definitions. -- Terms not defined in this section herein shall have the same meaning as contained in chapter 26 of title 39 of the general laws. When used in this chapter:

(1) “Eligible net metering resource” means eligible renewable energy resource as defined in § 39-26-5 including biogas created as a result of anaerobic digestion, but, specifically
excluding all other listed eligible biomass fuels;

(2) "Eligible Net Metering System" means a facility generating electricity using an eligible net metering resource that is reasonably designed and sized to annually produce electricity in an amount that is equal to or less than the renewable self-generator's usage at the eligible net metering system site measured by the three (3) year average annual consumption of energy over the previous three (3) years at the electric distribution account(s) located at the eligible net metering system site. A projected annual consumption of energy may be used until the actual three (3) year average annual consumption of energy over the previous three (3) years at the electric distribution account(s) located at the eligible net metering system site becomes available for use in determining eligibility of the generating system. The eligible net metering system must be owned by the same entity that is the customer of record on the net metered accounts. Notwithstanding any other provisions of this chapter, any eligible net metering resource: (i) owned by a public entity or multi-municipal collaborative or (ii) owned and operated by a renewable generation developer on behalf of a public entity or multi-municipal collaborative through public entity net metering financing arrangement shall be treated as an eligible net metering system and all accounts designated by the public entity or multi-municipal collaborative for net metering shall be treated as accounts eligible for net metering within an eligible net metering system site.

(3) "Eligible Net Metering System Site" means the site where the eligible net metering system is located or is part of the same campus or complex of sites contiguous to one another and the site where the eligible net metering system is located or a farm in which the eligible net metering system is located. Except for an eligible net metering system owned by or operated on behalf of a public entity or multi-municipal collaborative through a public entity net metering financing arrangement, the purpose of this definition is to reasonably assure that energy generated by the eligible net metering system is consumed by net metered electric service account(s) that are actually located in the same geographical location as the eligible net metering system. All energy generated from any eligible net metering system is and will be considered consumed at the meter where the renewable energy resource is interconnected for valuation purposes. Except for an eligible net metering system owned by or operated on behalf of a public entity or multi-municipal collaborative through a public entity net metering financing arrangement, all of the net metered accounts at the eligible net metering system site must be the accounts of the same customer of record and customers are not permitted to enter into agreements or arrangements to change the name on accounts for the purpose of artificially expanding the eligible net metering system site to contiguous sites in an attempt to avoid this restriction. However, a property owner
may change the nature of the metered service at the accounts at the site to be master metered in
the owner's name, or become the customer of record for each of the accounts, provided that the
owner becoming the customer of record actually owns the property at which the account is
located. As long as the net metered accounts meet the requirements set forth in this definition,
there is no limit on the number of accounts that may be net metered within the eligible net
metering system site.

(4) "Excess Renewable Net Metering Credit" means a credit that applies to an eligible
net metering system for that portion of the renewable self-generator's production of electricity
beyond one hundred percent (100%) and no greater than one hundred twenty-five percent (125%)
of the renewable self-generator's own consumption at the eligible net metering system site during
the applicable billing period. Such excess renewable net metering credit shall be equal to the
electric distribution company's avoided cost rate, which is hereby declared to be the electric
distribution company's standard offer service kilo-watt hour (kWh) charge for the rate class and
time-of-use billing period (if applicable) applicable to the distribution customer account(s) at the
eligible net metering system site. Where there are accounts at the eligible net metering system site
in different rate classes, the electric distribution company may calculate the excess renewable net
metering credit based on the average of the standard offer service rates applicable to those on-site
accounts. The electric distribution company has the option to use the energy received from such
excess generation to serve the standard offer service load. The commission shall have the
authority to make determinations as to the applicability of this credit to specific generation
facilities to the extent there is any uncertainty or disagreement.

(5) "Farm" shall be defined in accordance with § 44-27-2, except that all buildings
associated with the farm shall be eligible for net metering credits as long as: (i) The buildings are
owned by the same entity operating the farm or persons associated with operating the farm; and
(ii) The buildings are on the same farmland as the project on either a tract of land contiguous with
or reasonably proximate to such farmland or across a public way from such farmland.

(6) "Multi-municipal collaborative" means a group of towns and/or cities that enter into
an agreement for the purpose of co-owning a renewable generation facility or entering into a
financing arrangement pursuant to subdivision (7).

(7) "Public entity net metering financing arrangement" means arrangements entered into
by a public entity or multi-municipal collaborative with a private entity to facilitate the financing
and operation of a net metering resource, in which the private entity owns and operates an eligible
net metering resource on behalf of a public entity or multi-municipal collaborative, where: (i) The
eligible net metering resource is located on property owned or controlled by the public entity or
one of the municipalities, as applicable, and (ii) The production from the eligible net metering resource and primary compensation paid by the public entity or multi-municipal collaborative to the private entity for such production is directly tied to the consumption of electricity occurring at the designated net metered accounts.

(8) "Net metering" means using electricity generated by an eligible net metering system for the purpose of self-supplying power at the eligible net metering system site and thereby offsetting consumption at the eligible net metering system site through the netting process established in this chapter.

(9) "Net metering customer" means a customer of the electric distribution company receiving and being billed for distribution service whose distribution account(s) are being net metered.

(10) "Person" means an individual, firm, corporation, association, partnership, farm, town or city of the State of Rhode Island, multi-municipal collaborative, or the State of Rhode Island or any department of the state government, governmental agency or public instrumentality of the state.

(11) "Project" means a distinct installation of an eligible net metering system. An installation will be considered distinct if it is installed in a different location, or at a different time, or involves a different type of renewable energy.

(12) "Public entity" means the state of Rhode Island, municipalities, wastewater treatment facilities, public transit agencies or any water distributing plant or system employed for the distribution of water to the consuming public within this state including the water supply board of the city of Providence.

(13) "Renewable Net Metering Credit" means a credit that applies to an Eligible Net Metering System up to one hundred percent (100%) of the renewable self-generator's usage at the Eligible Net Metering System Site over the applicable billing period. This credit shall be equal to the total kilowatt hours of electricity generated and consumed on-site during the billing period multiplied by the sum of the distribution company's:

(i) Standard offer service kilowatt hour charge for the rate class applicable to the net metering customer;

(ii) Distribution kilowatt hour charge;

(iii) Transmission kilowatt hour charge; and

(iv) Transition kilowatt hour charge.

(14) "Renewable self-generator" means an electric distribution service customer who installs or arranges for an installation of renewable generation that is primarily designed to
produce electricity for consumption by that same customer at its distribution service account(s).

(15) "Municipality“ means any Rhode Island town or city, including any agency or instrumentality thereof, with the powers set forth in title 45 of the general laws.

39-26.4-3. Net metering. -- (a) The following policies regarding net metering of electricity from eligible net metering systems and regarding any person that is a renewable self-generator shall apply:

(1) The maximum, allowable capacity for eligible net-metering systems, based on nameplate capacity, shall be five ten megawatts (5 MW). The aggregate amount of net metering in the Block Island Power Company and the Pascoag Utility District shall not exceed three percent (3%) of peak load for each utility district.

(2) For ease of administering net-metered accounts and stabilizing net metered account bills, the electric-distribution company may elect (but is not required) to estimate for any twelve-month (12) period:

(i) The production from the eligible net metering system; and

(ii) Aggregate consumption of the net-metered accounts at the eligible net-metering system site and establish a monthly billing plan that reflects the expected credits that would be applied to the net-metered accounts over twelve (12) months. The billing plan would be designed to even out monthly billings over twelve (12) months, regardless of actual production and usage. If such election is made by the electric-distribution company, the electric-distribution company would reconcile payments and credits under the billing plan to actual production and consumption at the end of the twelve-month (12) period and apply any credits or charges to the net-metered accounts for any positive or negative difference, as applicable. Should there be a material change in circumstances at the eligible net-metering system site or associated accounts during the twelve-month (12) period, the estimates and credits may be adjusted by the electric-distribution company during the reconciliation period. The electric-distribution company also may elect (but is not required) to issue checks to any net metering customer in lieu of billing credits or carry forward credits or charges to the next billing period. For residential eligible net metering systems twenty-five kilowatts (25 kw) or smaller, the electric-distribution company, at its option, may administer renewable net-metering credits month to month allowing unused credits to carry forward into following billing period.

(3) If the electricity generated by an eligible net-metering system during a billing period is equal to, or less than the net-metering customer's usage during the billing period for electric-distribution-company customer accounts at the eligible net-metering system site, the customer shall receive renewable net-metering credits, that shall be applied to offset the net-metering
customer's usage on accounts at the eligible net-metering-system site.

(4) If the electricity generated by an eligible net-metering system during a billing period is greater than the net-metering customer's usage on accounts at the eligible net-metering-system site during the billing period, the customer shall be paid by excess renewable net-metering credits for the excess electricity generated beyond the net-metering customer's usage at the eligible net-metering-system site up to an additional twenty-five percent (25%) of the renewable self-generator's consumption during the billing period; unless the electric-distribution company and net-metering customer have agreed to a billing plan pursuant to subdivision (3).

(5) The rates applicable to any net-metered account shall be the same as those that apply to the rate classification that would be applicable to such account in the absence of net-metering, including customer and demand charges, and no other charges may be imposed to offset net-metering credits.

(b) The commission shall exempt electric-distribution company customer accounts associated with an eligible, net-metering system from back-up or standby rates commensurate with the size of the eligible net-metering system, provided that any revenue shortfall caused by any such exemption shall be fully recovered by the electric distribution company through rates.

(c) Any prudent and reasonable costs incurred by the electric-distribution company pursuant to achieving compliance with subsection (a) and the annual amount of the distribution component of any renewable net-metering credits or excess, renewable net-metering credits provided to accounts associated with eligible net-metering systems, shall be aggregated by the distribution company and billed to all distribution customers on an annual basis through a uniform, per-kilowatt-hour (kwh) surcharge embedded in the distribution component of the rates reflected on customer bills.

(d) The billing process set out in this section shall be applicable to electric-distribution companies thirty (30) days after the enactment of this chapter.

SECTION 4. This act shall take effect sixty (60) days after passage and shall apply to all interconnection or net metering applications submitted and any interconnection impact studies issued on or after January 1, 2016.
EXPLANATION

BY THE LEGISLATIVE COUNCIL

OF

A N   A C T

RELATING TO PUBLIC UTILITIES AND CARRIERS

***

This act would prohibit electrical distribution companies from charging an interconnecting renewable energy customer for system modifications that are not directly related to the interconnection, except accelerated modifications for which the developer is repaid when the modification would have otherwise been made. It would require that any interconnection work must be completed no later than two hundred seventy (270) days from the applicant’s impact study or three hundred sixty (360) days from its initial application. The act would enable replacement of a renewable energy resource without study or system improvement costs and would require the electric distribution company to take responsibility for regulatory obligations it creates when it elects to resell in the wholesale markets electricity it receives from customers that do not directly participate in the wholesale markets.

This act would also allow a maximum project size of ten megawatts (10 MW) for net metered projects in Rhode Island, and would ensure that net metered electricity is properly treated as consumed at the meter or meters designated for net metering, for regulatory and valuation purposes.

This act would take effect sixty (60) days after passage, and would apply to all interconnection or net metering applications submitted and any interconnection impact studies issued on or after January 1, 2016.
